SOUL KATANA

Network Upgrade at JPS Kubang Pasu

Report Period of 24/04/2022 - 24/05/2022

Date	Description

24/04/2022 Initial site visit. Following are the observations/actions:

- The current uplink infra is TM Streamyx 4Mbps.

- There is no high speed Internet service within the area.

- However upon observation, there is TM Unifi service at the nearby housing area, Emerald Saujana.

- It is a probability to pull the service across the trench that separates the project venue and the housing area.

- Made a request to TM to check availability of ports in that area and found out there are vacancies.

- Made a call to BTMK and found that the state government may not be approving new future Internet installation at state agencies.

- Informed the JD and agreed to try to apply for it anyway with provided plausible reasons.

- Will have to produce a draft of the letter with technical cause and explanation.
